

# ALBERT KEALI'INUI BATES

**Albert Bates** is founder of the Ecovillage Training Center at The Farm in Tennessee, co-founder of the Global Ecovillage Network (GEN), and author of more than 20 books on history, ecology and the future. He was head of delegation for the Global Ecovillage Network at the Copenhagen, Cancun and Paris climate summits. He holds degrees in political science, law and permaculture and certifications in emergency medicine, horsemastership and forest management. As a lawyer, he argued multiple cases before the US Supreme Court and drafted legislative acts. He was co-recipient of the first Right Livelihood Award (1980) for the work of his organization, Plenty International, in preserving the cultures of indigenous peoples. He is also a recipient of the first Gaia Award for his ecovillage work and the 2024 EcoHero Award for lifetime achievement. His children's book, *Taming Plastic*, was nominated for the 2021 Earth Prize.

The handmade suit he wore at the State Supreme Court when restoring the vote to 200,000 disenfranchised ex-felons hangs in the permanent collection of the Tennessee State Museum.

Some describe what Albert Bates provides as permaculture but that is rather inexact. He is creator and director of one of the world's first ecovillage training centers, founded in 1994. In the process of designing and building that, he traveled to many like centers in scores of countries. More than 60,000 students from six continents have studied with him, and many have gone on to implement projects in their countries that imitate, replicate and sometimes surpass the Tennessee center. There are now some 20,000 ecovillages in the world.

Bates has 30 years experience with both temperate and tropical bamboos. He has designed and built chinampas. He has designed and built agroforestry systems. He has designed and constructed more than 20 large community buildings and residences. He has designed and built artificial wetlands for greywater and blackwater. He has designed and built compost toilets and solar showers. He has designed and built solar cars, wind generators and solar PV arrays. He has designed and run volunteer and apprenticeship programs. He has instructed workshops and seminars in more than 50 countries, including teaching more than 50 Permaculture Design Certification courses. He helped design the standard Ecovillage Design curriculum now used around the world and contributed to the five-volume training manual. He advised King Charles III, when he was Prince of Wales, in creation of the Common Earth program of the Commonwealth of Nations. He has assisted speech preparations of Commonwealth General Secretary Patricia Scotland at United Nations plenaries.

From this experience, he has spoken widely and written or contributed to several books that set forward training curricula and pedagogies for transforming human habitat and behavior to a new paradigm; one that recognizes the need for balance with the flows and rhythms of nature. And, on that journey he discovered a killer app for repairing the earth's climate. It changes everything. This is the focus of his present work.
